

Smoke Test Status

Review this at end of day if any behaviour changed. Each area lists what it validates and what app changes would require updating it.

1. Page load (12 tests)

Validates the page opens without JS errors, test harness is accessible, key DOM elements exist including eodBtn, jiraSection, timer controls, live-info boxes, and weather/calendar widgets.

Update if: major structural changes to the IIFE, startup sequence, or key element IDs change.

2. roundToNearest30 (9 tests)

Validates all 8 boundary cases: 0, 8, 15, 16, 30, 45, 46, 59 minutes + seconds zeroed. **Update if:** rounding logic or thresholds change.

3. localStorage round-trip (5 tests)

Validates entries and categories survive a page reload. Checks stat counter reflects loaded data.

Update if: storage keys (wl_entries_v1, wl_cats_v1) change, or load/save logic changes.

4. Timer start & display (3 tests)

Validates timer bar is visible, shows correct task name, and elapsed time is non-zero. **Update if:** timer bar HTML IDs change or timer display logic changes.

5. Timer persistence across reload (3 tests)

Validates a running timer survives a page reload. **Update if:** timer state storage (wl_timer_v1) or resumeTimerIfActive() changes.

6. completedAt (3 tests)

Validates completedAt is set when a task is marked Done, is not the 23:59 sentinel, and is within 30 minutes of now (accounting for rounding). **Update if:** completedAt logic, the 23:59 sentinel approach, or Done status handling changes.

7. Auto-carry (5 tests)

Validates unfinished tasks carry to today with correct status, done tasks are excluded, and pending/blocked tasks carry with their status preserved (not reset to inprogress). **Update if:** autoCarryTasks(), patchCarriedTasks(), or carry key logic changes.

8. Sort order (2 tests)

Validates In Progress appears before To Do, and To Do tasks are sorted alphabetically. **Update if:** sort logic or STATUS_ORDER changes.

9. Plan count header (3 tests)

Validates the "X to do · X in progress · X done" format. **Update if:** planCount text format changes.

10. Week number (2 tests)

Validates week number is shown in "Week X/Y" format with a valid range. **Update if:** week number display or getISOWeek() logic changes.

End-of-day checklist

After a coding session, scan this list and ask:

- Did I change any logic covered by a test area above?
 - If yes → update the relevant tests in smoke-tests.js
 - Run `node smoke-tests.js` locally to verify before pushing
 - Commit updated tests alongside the code change
-

11. Distraction tracking (2 tests)

Validates a distraction injected into `wl_distractions_v1` appears in `distractionSection`. **Update if:** distraction storage key or `renderDistractionCount()` changes.

12. Active task highlighting (tests)

Validates `.active-timer` CSS class is applied to the plan item whose text matches the running timer. **Update if:** active-timer class name or `renderPlan` highlighting logic changes.

13-15. Emergency mode (tests)

Validates `Ctrl+Shift+F` enters emergency focus mode (`body.emergency` class), non-essential sections hide, and `Escape` exits. **Update if:** emergency mode key binding or body class name changes.

16. Transition handoff note (tests)

Validates first stop-click shows `timerHandoff` input, second click saves note to `wl_handoff`, and

the note does not appear in the quick-pick suggestions. **Update if:** timerHandoff element ID, wl_handoff storage key, or two-click stop flow changes.

17. Day-change fixes & task retirement (tests)

17a: no ReferenceError on load (_lastTickDate TDZ guard). 17b: marking today's task done also retires same-text tasks from past days. 17c: completed section deduplicates same-text tasks, showing only the most recent. **Update if:** _lastTickDate initialisation, retirement logic, or completed dedup changes.

18. Untracked slot boundary (3 tests)

Validates a tsEnd exactly on a 30-min boundary does NOT cover the following slot in the timeblock. **Update if:** timeToSlot(), covered-slot calculation, or boundary-fix logic changes.

19. Paused timer live block cap (3 tests)

Validates a paused timer's timeblock coverage ends at the pause point, not at Date.now(). **Update if:** paused-timer coverage logic in renderTimeblock() changes.

20. Pending-carry self-heal (3 tests)

Validates patchCarriedTasks corrects a task carried as inprogress when the most recent past version was pending — restores correct status and copies statusComments forward. **Update if:** patchCarriedTasks() self-heal logic or statusComments carry behaviour changes.

21. Handoff note not in quick pick (3 tests)

Validates the quick-pick list renders task names but does not expose handoff note content. **Update if:** quick-pick rendering logic or wl_handoff display logic changes.

22. Task emoji (3 tests)

Validates a stored emoji appears in the task name text. Confirms no plan-emoji-btn exists in the task list (emoji buttons live only in the timeblock since this feature moved). **Update if:** task name rendering or where emoji buttons are placed changes.

23. Start of day button (3 tests)

Validates clicking sodBtn stores a timestamp under wl_sod_YYYY-MM-DD and updates button text to include "started". **Update if:** sodKey format, renderSodBtn label, or SOD click handler changes.
